Table S. Countries assigned to the Historical and Novel geographic ranges of West Nile virus Lineage 2 for this study.

Historical Range (n = 11)	Novel Range (n = 20)
Central African Republic	Austria
Democratic Republic of the Congo	Belgium
Kenya	Cyprus
Madagascar	Czech Republic
Namibia	Estonia
Senegal	France
South Africa	Greece
Tanzania	Hungary
Uganda	India
Zambia	Iran
Zimbabwe	Israel
—	Italy
—	Kazakhstan
—	Malaysia
—	Nepal
—	Russia
—	Slovakia
—	Switzerland
—	Turkey
—	Viet Nam

Note: Countries were classified according to the geographic origin of WNV Lineage 2 sequences and their associated metadata. The Historical Range comprised 11 countries in sub-Saharan Africa and Madagascar, where Lineage 2 has circulated for the longest documented period. The Novel Range comprised 20 countries in Europe, the Middle East and Asia, representing regions beyond its historically recognised African range. Hungary recorded the first confirmed detection of WNV-L2 in Europe in 2004. This classification was used to group sequences for comparative analysis and was based on geographic origin rather than phylogenetic relationships. Not all countries listed were represented in the final analysed dataset.
